2.4 The Execution of Commands

1/7

Replacement of Location

Notation

Let σ be a state. Let $m \in \mathbb{N}$. Let $X \in \mathbf{Loc}$. A new state which obtained from σ by replacing its contents in X by m is denoted as follows;

$$\sigma[m/X].$$

And we have

$$\sigma[m/X](Y) = \begin{cases} m & \text{if } Y = X \\ \sigma(Y) & \text{if } Y \neq X \end{cases}$$

Example (Quiz)

- $(\sigma[5/X])[3/Y](X) = ?$
- $\sigma[2/Y](X) = ?$

2.4 The Execution of Commands

3/7

Execution of Commands

Definition (execution relation)

A relation

$$\langle c, \sigma \rangle \rightarrow \sigma'$$

means that execution of command c in state σ terminates in final state σ' .

Example

- $\langle X := 5, \sigma \rangle \rightarrow \sigma'$
- $\langle \text{skip}, \sigma \rangle \rightarrow \sigma$
- $\langle \text{while false do } X := 5, \sigma \rangle \rightarrow \sigma$

2.4 The Execution of Commands

2/7

Rules for Commands 1

Definition (commands execution)

Atomic commands

$$\frac{}{\langle \text{skip}, \sigma \rangle \rightarrow \sigma} \quad \frac{\langle a, \sigma \rangle \rightarrow m}{\langle X := a, \sigma \rangle \rightarrow \sigma[m/X]}$$

Sequencing

$$\frac{\langle c_0, \sigma \rangle \rightarrow \sigma'' \quad \langle c_1, \sigma'' \rangle \rightarrow \sigma'}{\langle c_0; c_1, \sigma \rangle \rightarrow \sigma'}$$

Conditionals

$$\frac{\langle b, \sigma \rangle \rightarrow \mathbf{true} \quad \langle c_0, \sigma \rangle \rightarrow \sigma'}{\langle \text{if } b \text{ then } c_0 \text{ else } c_1, \sigma \rangle \rightarrow \sigma'} \quad \frac{\langle b, \sigma \rangle \rightarrow \mathbf{false} \quad \langle c_1, \sigma \rangle \rightarrow \sigma'}{\langle \text{if } b \text{ then } c_0 \text{ else } c_1, \sigma \rangle \rightarrow \sigma'}$$

2.4 The Execution of Commands

4/7

Rules for Commands 2

Definition (commands execution)

While-loops

$$\frac{\langle b, \sigma \rangle \rightarrow \mathbf{false}}{\langle \mathbf{while } b \mathbf{ do } c, \sigma \rangle \rightarrow \sigma}$$

$$\frac{\langle b, \sigma \rangle \rightarrow \mathbf{true} \quad \langle c, \sigma \rangle \rightarrow \sigma'' \quad \langle \mathbf{while } b \mathbf{ do } c, \sigma'' \rangle \rightarrow \sigma'}{\langle \mathbf{while } b \mathbf{ do } c, \sigma \rangle \rightarrow \sigma'}$$

Example

A deriving tree of $X := 2; \mathbf{if } X \leq 3 \mathbf{ then } X := 0 \mathbf{ else } X := 1$ is

$$\frac{\frac{\langle 2, \sigma \rangle \rightarrow 2}{\langle X := 2, \sigma \rangle \rightarrow \sigma[2/X]} \quad \frac{\frac{\frac{\langle X, \sigma[2/X] \rangle \rightarrow 2 \quad \langle 3, \sigma[2/X] \rangle \rightarrow 3}{\langle X \leq 3, \sigma[2/X] \rangle \rightarrow \mathbf{true}} \quad \frac{\langle 0, \sigma[2/X] \rangle \rightarrow 0}{\langle X := 0, \sigma[2/X] \rangle \rightarrow \sigma[0/X]}}{\langle \mathbf{if } X \leq 3 \mathbf{ then } X := 0 \mathbf{ else } X := 1, \sigma[2/X] \rangle \rightarrow \sigma[0/X]}}{\langle X := 2; \mathbf{if } X \leq 3 \mathbf{ then } X := 0 \mathbf{ else } X := 1, \sigma \rangle \rightarrow \sigma[0/X]}$$

Equivalence Relation on Commands

Definition (equivalence relation \sim on commands)

Let c_0 and c_1 be a command, a equivalence relation \sim on commands is defined as follows;

$$c_0 \sim c_1 := \forall \sigma, \sigma' \in \Sigma. \langle c_0, \sigma \rangle \rightarrow \sigma' \iff \langle c_1, \sigma \rangle \rightarrow \sigma'.$$

Example (Quiz)

- does $X := 5 \sim X := 2 + 3$ hold?
- does $\mathbf{if true then } X := 5 \mathbf{ else } X := 0 \sim \mathbf{if false then } X := 0 \mathbf{ else } X := 5$ hold?
- does $X := 5; \mathbf{skip} \sim X := 5; \mathbf{while false do } X := 0$ hold?
